

# Hermes Agent — bentech.dev

Complete Setup & Deployment Guide

## Stack Overview

This guide deploys **Hermes-3-8B** (local LLM via Ollama) and **Open WebUI** (chat interface) as a Docker Swarm stack, then exposes it at **hermes.bentech.dev** via Nginx Proxy Manager with SSL.

| Component  | Role                                | Port        |
|------------|-------------------------------------|-------------|
| Ollama     | Serves Hermes-3-8B locally          | 11434       |
| Open WebUI | Chat UI + tool use + RAG            | 3000 → 8080 |
| NPM        | Reverse proxy + SSL termination     | 80 / 443    |
| Cloudflare | DNS A record for hermes.bentech.dev | —           |

## Step 1 — Confirm Your Server's Public IP

SSH into your server and run:

```
curl ifconfig.me
```

Note the returned IP address — this is what you'll use throughout. For bentech.dev this is **51.83.7.159**.

## Step 2 — Add DNS Record in Cloudflare

- Log into **Cloudflare** and select the **bentech.dev** zone
- Go to **DNS** → **Records** → **Add record**

| Field        | Value                                 |
|--------------|---------------------------------------|
| Type         | A                                     |
| Name         | hermes                                |
| IPv4 address | 51.83.7.159                           |
| Proxy status | DNS only (grey cloud) — while testing |
| TTL          | Auto                                  |

DNS propagates within **1–5 minutes** on Cloudflare.

## Step 3 — Deploy the Docker Swarm Stack in Portainer

- In Portainer → **Stacks** → **Add stack**
- Name: **hermes-agent**

- Select **Web editor** and paste the compose below
- Click **Deploy the stack**

```
services: ollama: image: ollama/ollama:latest ports: - 11434:11434 volumes: -
ollama_data:/root/.ollama networks: - hermes-net deploy: restart_policy: condition: any
open-webui: image: ghcr.io/open-webui/open-webui:main ports: - 3000:8080 volumes: -
open_webui_data:/app/backend/data environment: - OLLAMA_BASE_URL=http://ollama:11434 -
WEBUI_SECRET_KEY=k9mX2pQr7vLnT4wY8jBdF1cA6sEuH3oZ networks: - hermes-net deploy:
restart_policy: condition: any volumes: ollama_data: open_webui_data: networks:
hermes-net: driver: overlay attachable: true
```

## Step 4 — Pull the Hermes Model

In Portainer → **Containers** → click **hermes-agent\_ollama\_...** → **Console** → **Connect**, then run:

```
ollama pull hermes3:8b
```

This downloads approximately **5GB**. Wait for completion before proceeding.

## Step 5 — Configure NPM Proxy Host

- Open NPM at **http://51.83.7.159:81**
- Go to **Hosts** → **Proxy Hosts** → **Add Proxy Host**

| Tab     | Field                 | Value                          |
|---------|-----------------------|--------------------------------|
|         | Domain Names          | hermes.bentech.dev             |
|         | Scheme                | http                           |
| Details | Forward Hostname      | 51.83.7.159                    |
|         | Forward Port          | 3000                           |
|         | Block Common Exploits | Enabled                        |
|         | Certificate           | Request new Let's Encrypt cert |
| SSL     | Force SSL             | Enabled                        |
|         | HTTP/2 Support        | Enabled                        |

## Step 6 — Access Open WebUI

- Go to **https://hermes.bentech.dev**
- Create your admin account on first visit
- Select **hermes3:8b** from the model dropdown and start chatting

## Step 7 — Connect OpenRouter (Claude + Other Models)

- In Open WebUI → **Settings** → **Connections** → **OpenAI API**
- URL: **https://openrouter.ai/api/v1**
- Key: your OpenRouter API key
- Save — all models (Claude Sonnet, GPT-4o, etc.) appear in the model picker

## Troubleshooting

| Symptom            | Fix                                                                |
|--------------------|--------------------------------------------------------------------|
| Server Not Found   | DNS record not saved or not propagated — wait 5 min and retry      |
| 502 Bad Gateway    | Open WebUI container not healthy — check Portainer Containers view |
| SSL cert fails     | Set Cloudflare proxy to grey cloud (DNS only) during cert issuance |
| Hermes not in list | Model pull not complete — check Ollama container console           |
| Deploy btn grayed  | Stack name field is empty — enter 'hermes-agent' at top of page    |
